cable kit

Cable Kit is a complete system that includes everything that you need to install floor heating - all packaged neatly in one box.

The thin, yet robust cable can be installed in all rooms around the home including kitchens, bathrooms and conservatories, under all types of floor - solid timber, laminate, tiles, or natural stone.

Cable Kit is ideal for use in both new build and refurbishment situations. Installed on a 10mm fibre mesh and cement faced insulation board combined with a thin layer of self-levelling compound it results in only around a 15mm increase in overall floor height. Being a loose cable, the spacing between the cable runs can be adjusted to ensure the correct heat output per m².

- **Heats the whole room - no need for radiators**
- **Provides an ideal living environment that is unmatched by any other form of heating**
- **Very low running costs**
- **Quick and easy to install**
- **Clean and silent in operation**
- **Totally maintenance free**
- **Highly efficient heating system**
- **If installed correctly, the cable will normally last the life of the building**

All our cables feature twin conductors and a built-in return. This means that electromagnetic fields are virtually eliminated and that only one end of the cable needs to be connected to the thermostat; whilst the other end features a built in return. This gives a faster installation time.

The internal insulation is Teflon. This is a high quality material that protects the electrical conductors and is used to ensure that the cables have a very long service life. All of our cables have full SEMCO product approval, are CE marked and come with a 10 year guarantee.
