

Dellava

heating mat kit

Dellava Heating Mat Kit is a complete system that includes everything that you need to install floor heating in a regular shaped room - all packaged neatly in one box.

All our Dellava Heating Mats are 500mm wide and are self adhesive for even easier installation. The Kit also contains a digital, programmable thermostat and floor probe.

Like Dellava Cable Kit, it can be installed in all rooms around the home including kitchens, bathrooms and conservatories; under all types of floor - solid timber, laminate, tiles, or natural stone.

THE KIT INCLUDES:

- Dellava Heating Mat
- TH132F 7-day programmable thermostat
- Floor sensor probe
- Protective pipe for the floor sensor
- Full installation instructions
- 10 year guarantee

If installed correctly, the mat will normally last the life of the building.

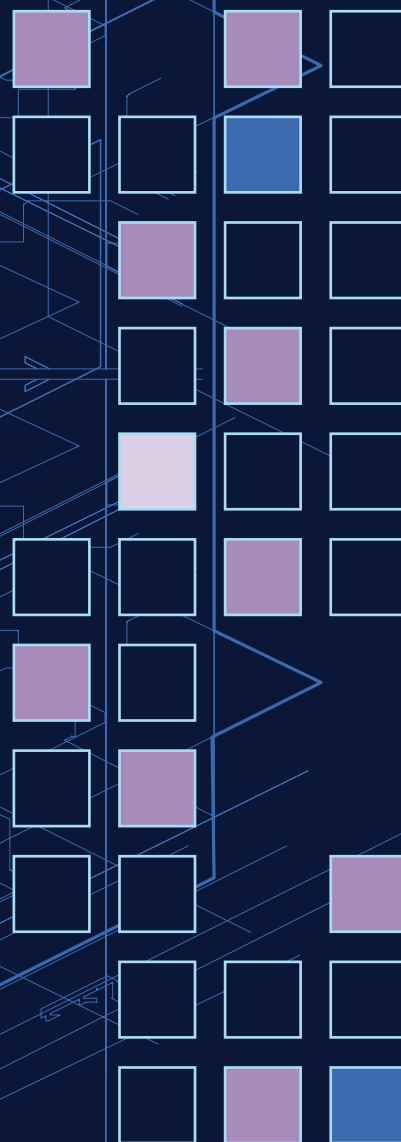

Dellava Heating Mat Kit is suitable for use on timber and concrete floors and construction grade floor insulation. It is fast to fit into square and rectangular rooms but can also be shaped to fit more complex room shapes. It is available in two different power ratings and there is a wide variety of sizes available.

120 Watts per m²

This is ideal for internal rooms. It can be installed on timber floors or our tile floor insulation and should be embedded in a thin, flexible, self-leveling screed. It is also suitable for use under solid timber flooring.

175 Watts per m²

This is ideal for rooms with higher heat losses e.g. conservatories. It can be installed on concrete floors or construction grade floor insulation and should be embedded in a thin, flexible, self-leveling screed. It should NOT be laid on timber or underneath solid timber flooring.
