

supplying the leading
underfloor heating solution

inscreed & universal cables

Our most versatile underfloor heating cables.

These are 6.5mm diameter cable that are used as the optimum heating solution for all buildings, including apartment blocks, all types of houses, offices and commercial premises.

Inscreed and Universal cables are a strong, high quality cable product that has been proven to be reliable and have a very long service life.

- Ideal for larger projects - both refurbishments and new build.
- Provides a total heating solution for all buildings.
- Suitable for most floor constructions including; concrete, block and beam, joisted timber floors, and acoustic floors to part E Building Regs.
- Eliminates the need for ugly radiators, valves and water pipes.
- Room layout is not compromised.
- Low capital cost and very economical to run.
- Totally maintenance free.

Inscreed and Universal Heating Cables - The Obvious Choice

Inscreed and Universal heating cables have been developed to withstand the highest demands imposed upon a floor heating system. The electrical installation is very straightforward as the cable is connected to the supply at *one end only*, this reduces installation time. Also, the cable construction virtually eliminates any electromagnetic fields.

SOLUTIONS FOR ALL FLOORS

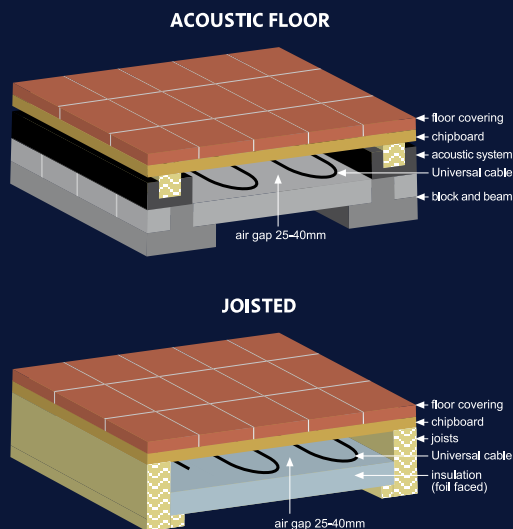

Universal cable is installed on insulation between the joists of a timber floor. Alternatively, it can be installed in a 8mm - 10mm flexible screed. This latter option is sometimes preferred in refurbishment works where a deeper screed would be unacceptable. This cable has an output of 12 watts per linear metre.

Inscreed cable is designed to be installed in a 50mm - 65mm sand and cement screed. It is recommended to include at least a 25mm foil faced insulation that the cables are laid onto prior to screeding. This cable has an output of 20 watts per linear metre.

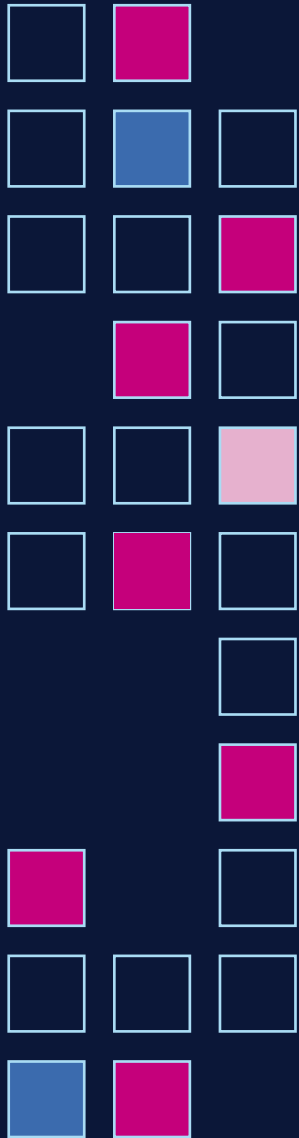

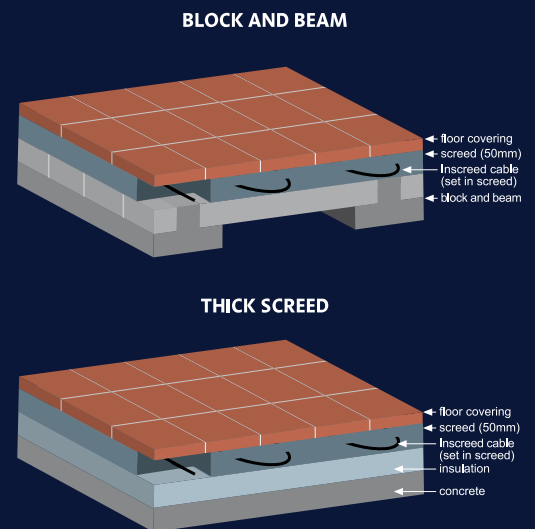

Universal cable for timber floors

12w per metre length cable

Inscreed cable for concrete floors

20w per metre length cable
